Native American Health Equity in Riverside County, CA

Mariel Del Rosario

Question: How does socioeconomic health need (or health equity index) correlate with Native American populations in Riverside County, CA? What role do land-use designation and the locations of hospitals play in this relationship?

- Creating vector layer of polygons and points
- Dissolve
- Filter
- Spatial joins
- Intersection

Findings

- Areas with higher socioeconomic health also tend to have higher Native American populations, though these populations are small to begin with
- Fewer hospitals in areas with higher Native American populations & areas that face higher health equity indexes
- Land designated for Native American people has relatively larger Native American populations, but a middling health equity index
- Cities with the lowest health equity index and the least Native American populations have the most hospitals
